Antimicrobial agent not requiring rinse

This product is acceptable for use as an antimicrobial sanitizer in and around food processing areas and not always requiring a rinse in and around food processing areas. Prior to use all food and packaging material should be removed or covered when the compound is used in food processing areas. After the use the surfaces, equipment or utensils does not have to be rinsed with potable water if they are thoroughly drained and any collection of liquid removed before food or packaging are re-exposed to the surfaces, equipment or utensils.

Use the product according to the manufacturer's instruction and applicable label directions. The amount used should be the minimum required to accomplish the desired technical effect.
